Subject: Request for establishment of State Marine Reserves

To Whom It May Concern,

Here are recommendations for establishment of State Marine Reserves in the North Central Coast Study Region that I feel are important and need to be enacted for the benefit of consumptive and non-consumptive recreation (based on Goal 3 of Marine Life Protection Act).

To see coastal photographs of the Lat-Lon's listed below, go to the California Coastal Records Project, an aerial photographic survey of the California Coastline: <http://www.californiacoastline.org/>

Extend Gerstle Cove State Marine Reserve:
Start From: N38 33.77 W123 20.10
Salt Point State Park, Gerstle Cove
See Image # 200504455

End At:N38 33.51 W123 19.65
South of Gerstle Cove in Salt Point State Park See Image # 200504461

Establish Fort Ross State Marine Reserve:
Start At: N38 31.24 W123 16.22
See Image # 200504511

End at: N38 30.21 W123 14.76
Between Fort Ross and Reef Camp Ground
See Image #200504532

Reasons for the establishment of State Marine Reserves in this Area.

1. Goal #3 of the California State Marine Life Protection Act requires the establishment of marine protected areas for consumptive and non-consumptive recreation. There has not been any recommended Marine Reserves for the improvement and benefit of non-consumptive recreation. These two areas are the most used by underwater photographer and newly certified open water divers.

2. These two areas have roads leading down to the beach where divers using heavy equipment and underwater cameras, can more easily access open water than any other areas in the North Central Coast Project. (Ocean Cove is heavily used by consumptives).

4. Goal #4 of the MLPA call for the protection and establishment of heritage marine protected areas. Gerstle Cove and Fort Ross are already established and protected State Parks. The protection of these small MPAs would qualify under the goal #4 of the State Law.

5. Somewhere in the whole North Coast Project, there should be some set aside for non-consumptive recreational use. These are the two most likely set aside for non-consumptive use.

6. The Non-Consumptive Recreational Use Pattern as mapped by the NOAA National MPA Center indicate that these two sites are most used for non-consumptive users.

7. Research diving at Gerstle Cove by Marine Ecology students of Dr. James Grass over the last ten years, shows that the abalone and other marine life are substantially more abundant at this presently established Marine Reserve and that the abalone is carried south into the next two coves.

8. I wish to have these two coves made into State Marine Reserves to provide myself and other divers the opportunity to see and appreciate the undersea attractions and ecology these areas offer.

Thanks

Charles Ingoglia
California resident and SCUBA diver
